Taxi Sale System

README FILE

Introduction

The TaxiSales & Company Management System is a full-stack web application designed to streamline and digitize transport fleet operations. Its primary uses include securely authenticating administrators and operators, managing partner transport profiles, tracking real-time taxi trip transactions and invoices, and generating detailed financial reports. The key advantages of the platform are its role-based data filtering—which ensures users only view relevant operational records—and its built-in export utilities that allow administrators to instantly download comprehensive summaries as Excel spreadsheets or formatted PDF documents.

Tech stack

- Frontend: React.js, Vite, Tailwind CSS, Axios, Lucide UI, `xlsx`, `jspdf`, `jspdf-autotable`
- Backend: Node.js, Express.js
- Database: MySQL (via `mysql2`)

Database Schema Reference

a) tbllogin: Stores system user credentials (`userName`, `password`)
b) tblcompany: Manages partner profiles (`companyId`, `companyname`, `address`, `contact`, `email`, `fileCount`, `lastDocCount`)
c) tblsaleheader:Captures trip and transaction details (`headerId`, `OperatorId`, `invoiceNumber`, `vehicleNo`, `vehicleModel`, `transactionDate`, `paymentType`, `TotalAmount`, etc.)

Prerequisites

- Git
- Node.js (if Node backend) or Python (if Python backend) or Java (if Java backend) — confirm the project stack
- A database (Postgres/MySQL) or use the included SQLite if available
- Docker & Docker Compose (optional)

Clone the repository

- git clone https://github.com/SEW200010/AirportTaxiSale.git
- cd AirportTaxiSale

Local development (generic)

install dependencies
npm install

configure environment variables
cp .env.example .env

edit .env to provide DB and other secrets
run migrations (if applicable)
npm run migrate

start in development mode
npm run dev

create virtualenv and install
python -m venv .venv
pip install -r requirements.txt

build and start containers
docker-compose up --build

API Endpoints Reference

Method	Endpoint	Description
POST	`/api/login`	Authenticates user credentials
GET	`/api/companies`	Retrieves all registered partner companies
POST	`/api/companies`	Registres a New partner company[cite
PUT	`/api/companies/:id`	Updates an existing company profile
DELETE	`/api/companies/:id`	Removes a company profile
GET	`/api/sales`	Fetches transaction records with role filtering
POST	`/api/sales`	Records a new sales transaction heade
GET	`/api/report`	Generates daily sales reports
GET	`/api/report-monthly`	Generates aggregate monthly summaries
GET	`/api/report-shop-monthly-summary`	Fetches company-specific monthly breakdowns
GET	`/api/report-monthly-invoice-count`	Compiles invoice volume statistics
